AI where it changes the economics of the work.

We help you decide where AI pays back, then build AI agent workflows that take manual effort out of operations, with people approving every decision that needs judgement.

TWO WAYS TO ENGAGE

AI Transformation

A roadmap and the first AI wins, measured before and after.

For leaders who need a defensible AI plan, not a pilot graveyard.

AI Agent Workflow

One operational workflow redesigned around AI agents and human approval.

For operations teams buried in manual, repeatable work.

HOW WE KEEP IT SAFE

AI proposes; people approve. Every decision that needs judgement stays with your team.

Every step is recorded, so results can be checked and audited.

Measured against a before-and-after baseline agreed at the start.

Built through the TechXio Value Method, with a quality gate at every stage.

PROOF

We run AI agents in our own products: PeopleSmartAI, AxenticOne and MarkXecute use the same human-approval pattern we bring to client work.

Find your first AI win

Start with a Value Discovery Sprint focused on one workflow.
